

Case Study

of Kit Management

“Kit Management” is a module in our school management system for pre-schools, between Franchisor and Franchisee, for managing “study-kit” stock, orders, payments and delivery.

Kit Management

The Kit or Study Kit here refers to a collection of student material like bags, books, stationery, etc., configured for each grade/age of students enrolling in pre-school at various franchisee centers.

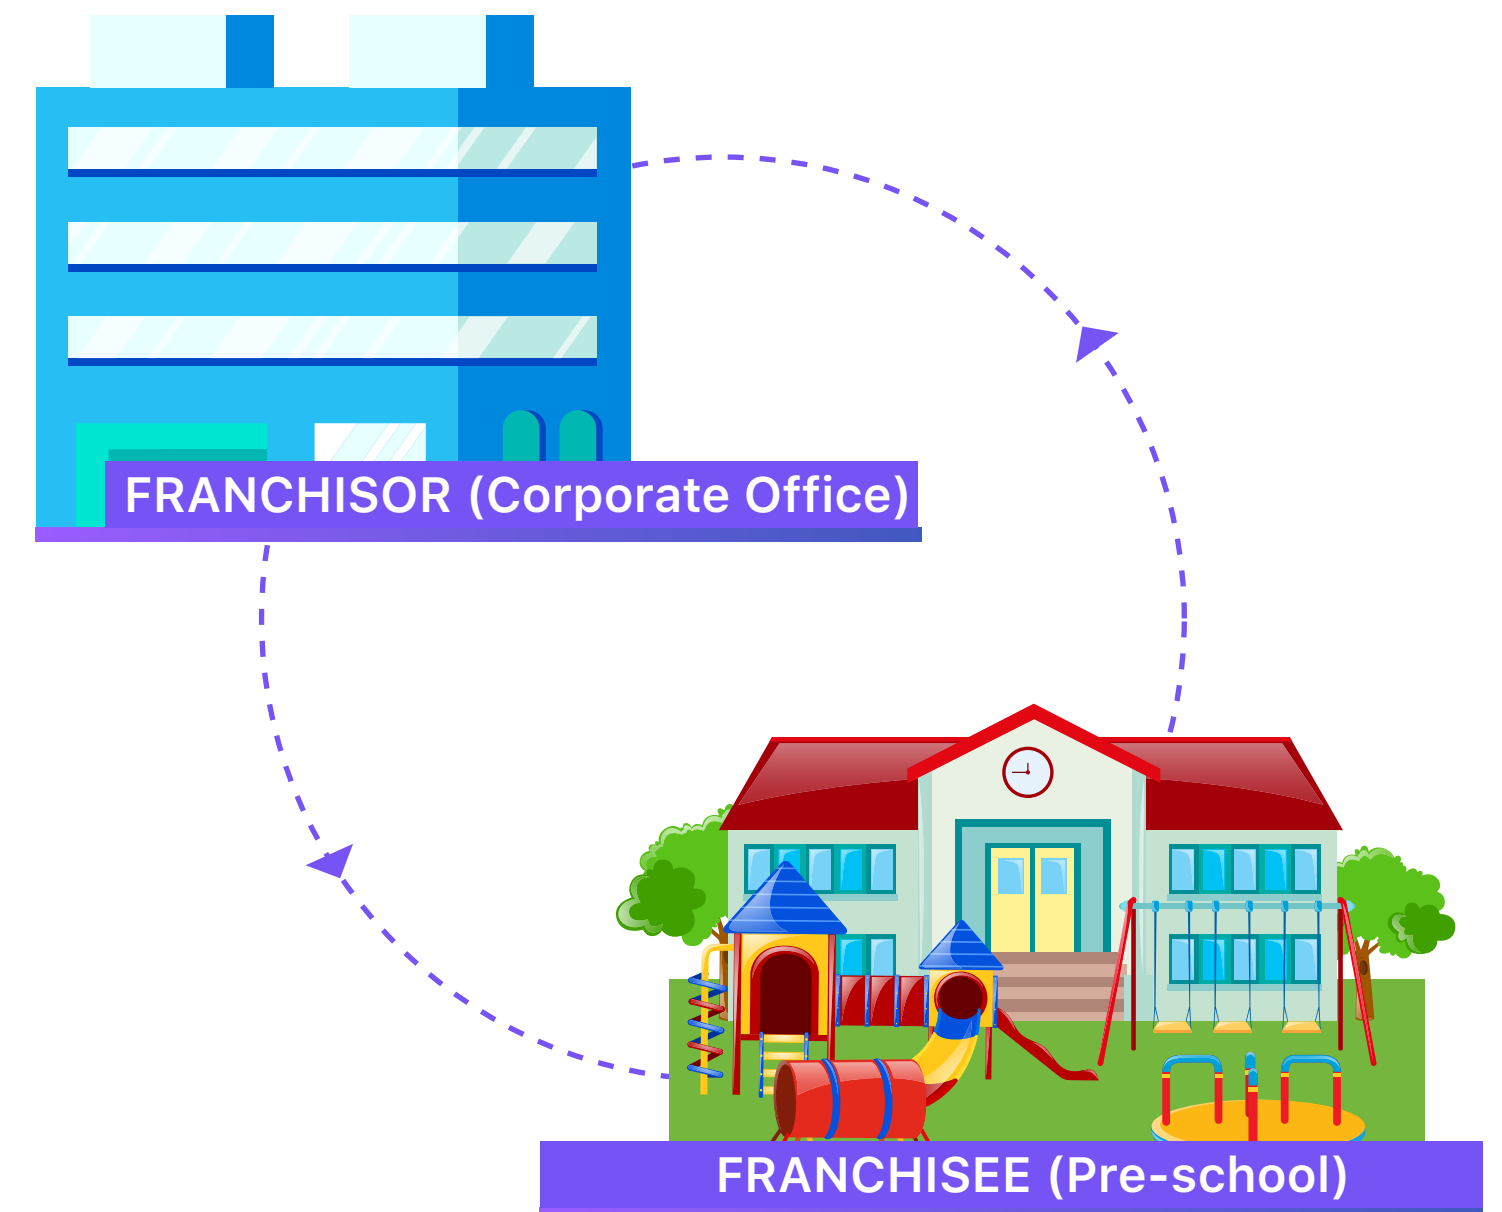

The main app is a school management software built for communication/collaboration between 2 main users, the "Franchisor" & "Franchisee" of a pre-school setup.

In this case study, I am attempting to explain a feature in the larger app, where managing "Study Kits" for newly enrolled is handled.

The franchisor: Controls the configuration/content, stock, and delivery of study kits.

Franchisee: Controls the configuration/content, stock, and delivery of study kits.

Primary Users

High-level requirements

The Project Manager explained high-level requirements to support the "Study Kit" management module.

FRANCHISOR (Corporate Office)

- Configures kit items per class
- Needs to keep track of stock
- Needs to handle new kit requests from Franchisees
- Needs a dashboard to monitor requests, stock, etc.

FRANCHISEE (Pre-school)

- Should be able to place new kit requests
- Monitor the status of kit requests and get timely updates
- A dashboard to monitor business at a high-level

Feature set

To cater to the above requirements, the following set of features were to be designed/proposed:

- **Manage Items** (Add / Edit / Delete items)

This feature helps the Franchisor to identify and manage the items that go into any kits configured and issued.

- **Kit Master** (Add / Edit / Delete Kit)

Franchisor to be able to configure the content of each Kit based on class and age group.

- **Kit Stock Entry** (Add / Edit stocks)

This is an overall inventory of all items that go into each type of kit, where we the Franchisor keep track of shortage or abundance and place orders from vendors accordingly to maintain optimal stock to supply to all Franchisees.

- **Manage Kit Request** (Payment / Dispatch Kit / Print Memo / Delete)

This is a request tracking/monitoring feature, where requests from various Franchisees will be catered to. The Franchisor should be able to

1. View requests
2. Validate payments
3. Dispatch kits

- **Kit Reports** (Default / Saved Reports)

The franchisor needs a dashboard for monitoring and reporting purposes to be able to get a bird-eye view of stock, business, collections, growth in demand, etc.

- **Kit Requests** (Add / Edit / Delete Request)

A franchisee should be able to furnish enrollment details and raise new kit requests. This feature also allows tracking of new requests placed.

The franchisee should also be able to furnish payment details for every request raised

- **Kit Reports** (Default / Saved Reports)

The franchisee is also provided with a dashboard to monitor new enrollments, requests, payments etc

Workflow – Kit Request

Franchisor

Dispatch Kit

Franchisor will get the notification for the new request

Open Kit request

Collect the payment for each kit

Franchisor confirms receipt of payment

No

Waiting for payment from franchisee
Won't dispatch.

Physical communication happen for the payment

Yes

Dispatch kit

Franchisor dispatched for all the kits

No

Kit partially dispatched for kit request

Partially Dispatched

Yes

Kit dispatched for kit request with status of

Dispatched

Franchisee

New Kit Request

Franchisee has new enrolled students. So they add a new kit request.

Select Request Date, need by date

Select the required students from new enrolled list

Add payment details for each selected student or as a single bulk

Submit the request

Request created with status of

Submitted

Kit request completed with

Dispatched

Generally in pre-schools enroll will happen any months. So after every time franchisee will request for the new enrolled students. Because franchisor not allow non enrolled students. By this franchisor can improve the kit sale in the right way.

Already mapped with kit amount for each class. So if you added the student will show the kit amount and calculated total amount.

This will help to franchisor to recheck and confirm the payment. Payment process manually happen in backend.

This status will be updated by franchisor. Franchisee get the notification and check the status by viewing the kit request from the kit lists.

By viewing the request can see all details of request that when created, how many students included in this request. when dispatched

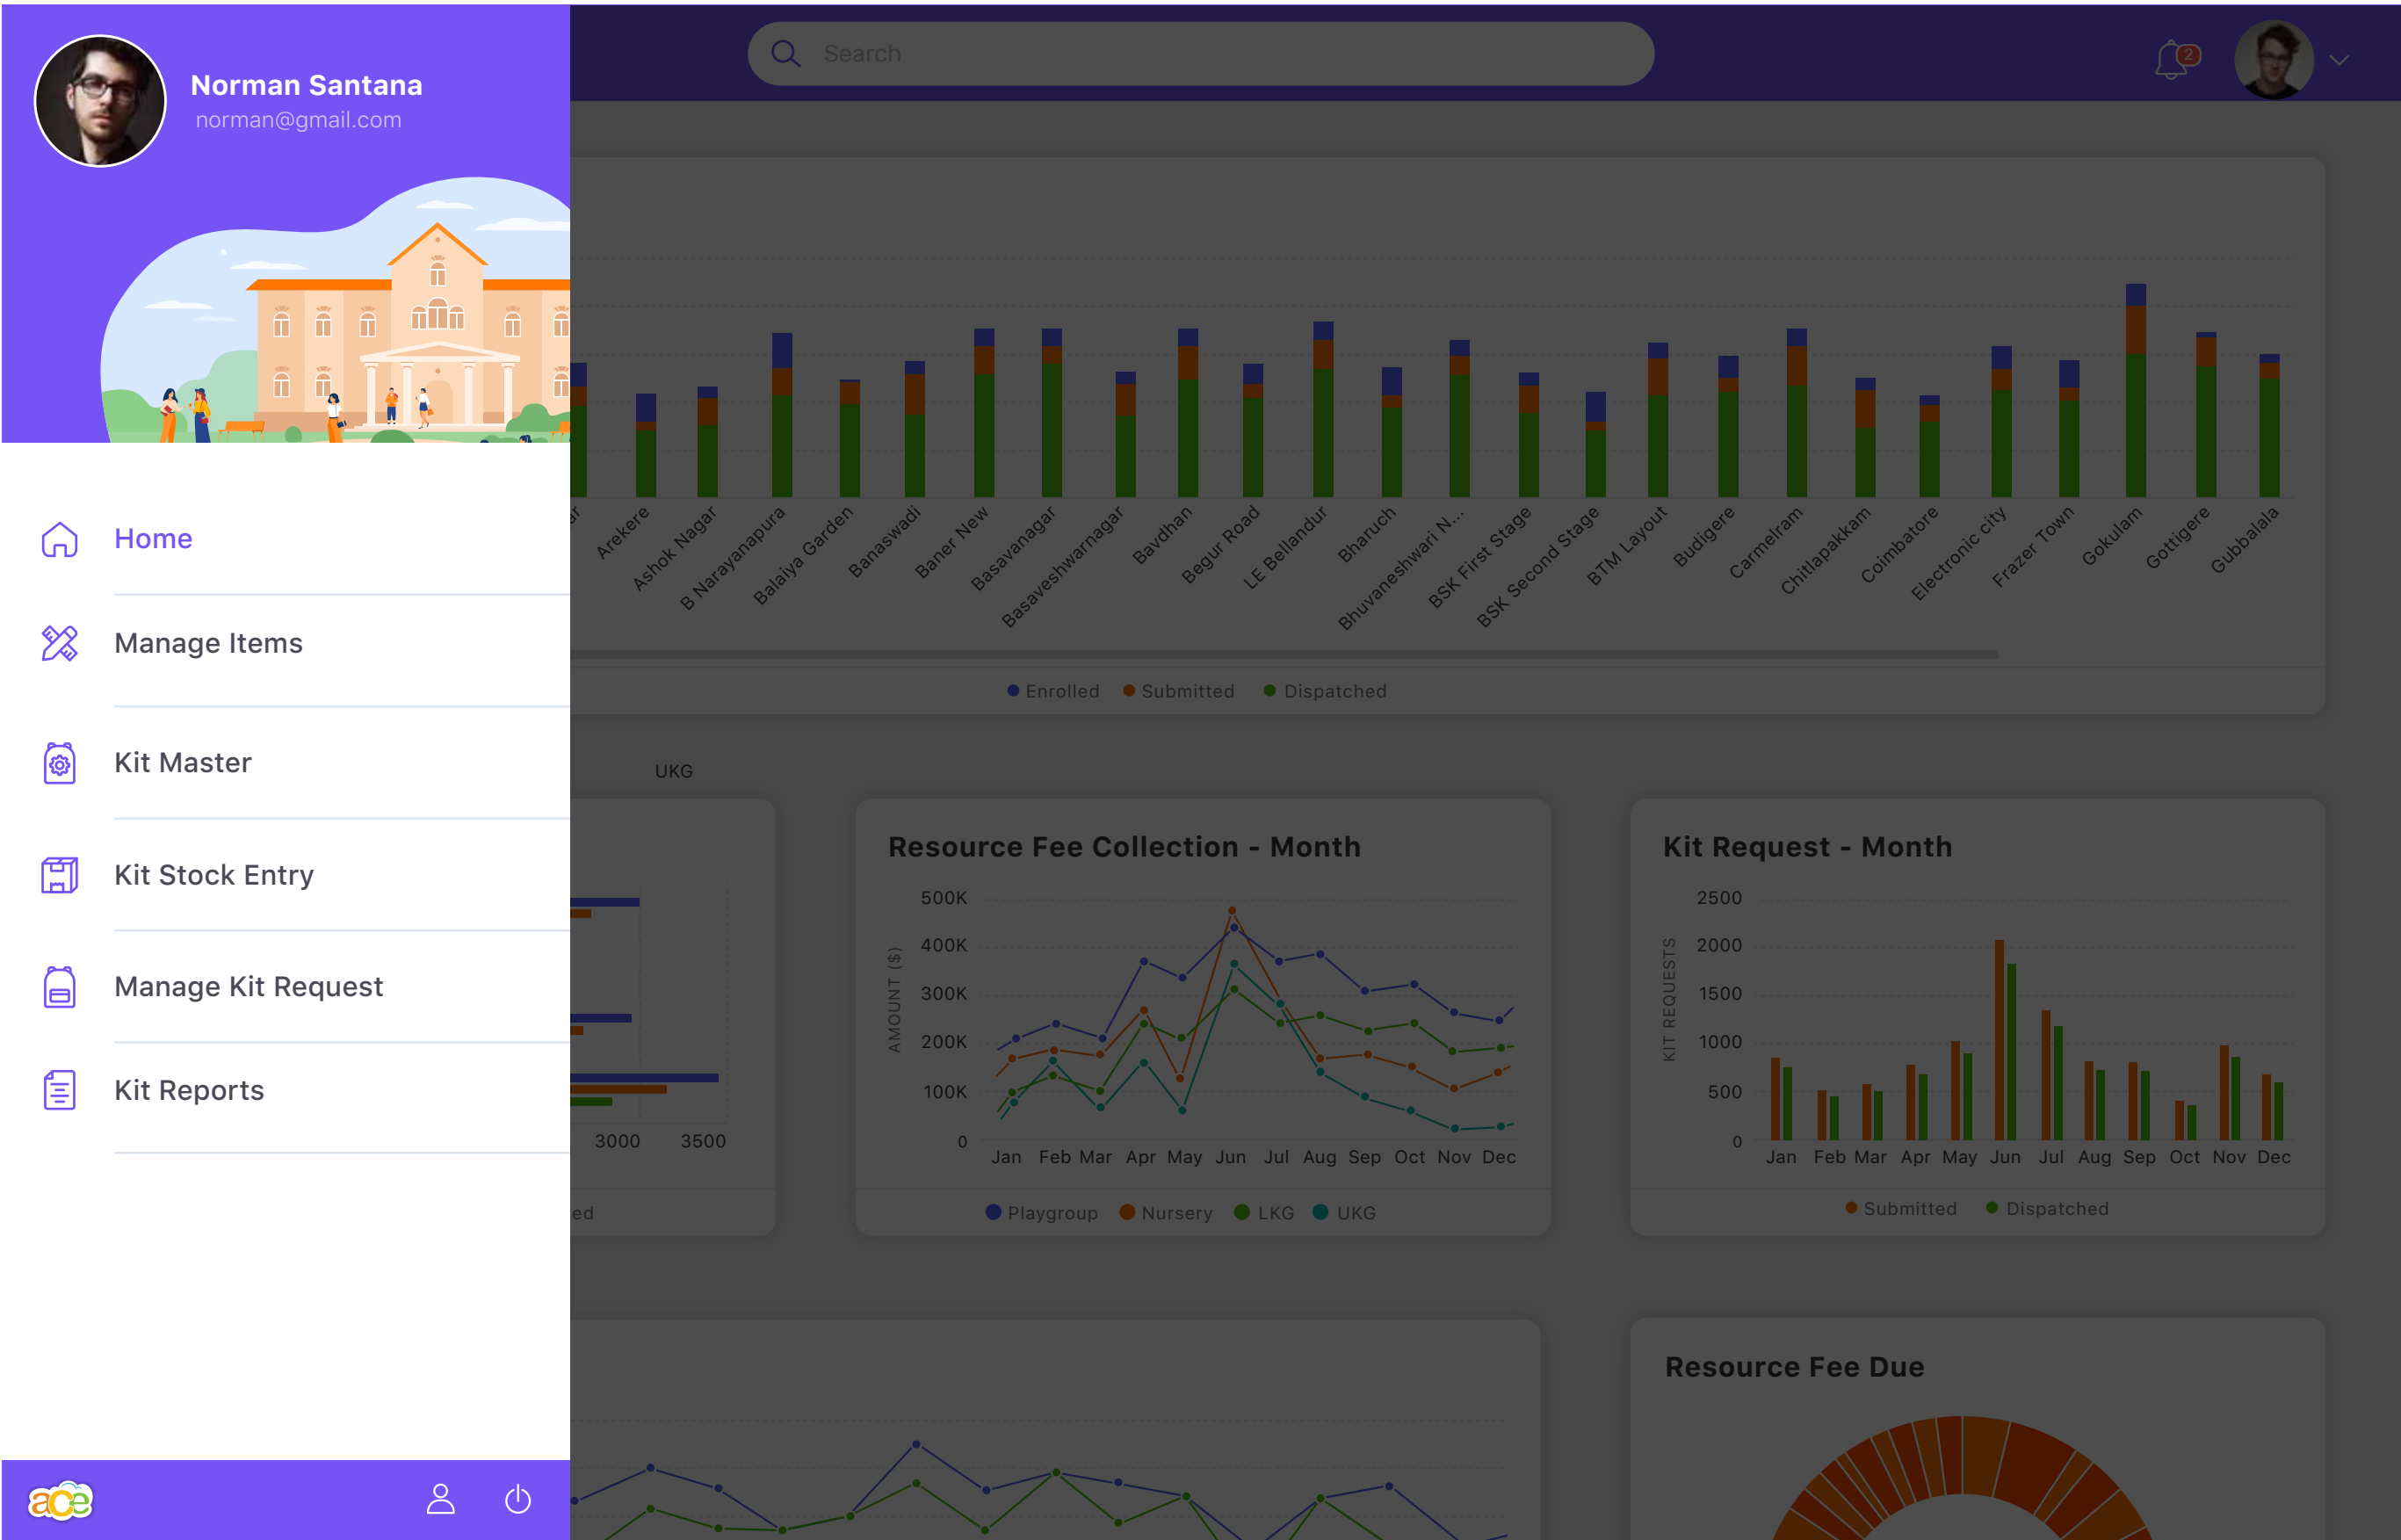

Workflow – High fidelity design

Franchisor Workflow

Franchisor has responsibility for kit items, kit master, stock entry, manage kit request. They required reports for all the section to analysis them business. All the flow coverd with high fidelity design. To see the pdf please click on below button.

VIEW HIGH FIDELITY DESIGN

Franchisee Workflow

Franchisee main workflow is send kit request for the new enrolled students. So handlink kit request is very importan flow. They required reports for all the section to analysis them business. All the flow coverd with high fidelity design. To see the pdf please click on below button.

My Team Communication

We worked as a trifecta consisting of UX, PM and Development Lead

My UX Work Process

1. UNDERSTAND THE BUSINESS

1. Project manager will tell the requirement.
2. I have think to understand and start to collect required info.
3. List out my doubts to discuss with PM.
4. Finally will understand the business.

2. FIND THE PROBLEMS

1. After understand the business we will decide the user.
2. User point of view what are the requied things.
3. In required things find the difficulty and problems.
4. Think towards the problems to find the solutions.

3. FIND SOLUTIONS

1. For the problems will find solutions. If can try for another solution also for the same problem.
2. Decide the flow for the solutions.
3. To check the solution with PM.

4. LOW FIDELITY / HIGH FIDELITY DESIGN

1. Based on time schedule and budget will decide low fidelity or high fidelity design.
2. Will decide all the flow designs.
3. While creating the design I will keep in mind that while adding new feature don't change the user experience already they comfortable.

5. GET APPROVAL

1. Every time complete the each flow design geting approval from PM.
2. At the same time I will check developer lead for technical support for that design.

6. SEND THE DESIGN FOR THE DEVELOPMET

1. After create final design will send to the development lead.
2. Prepare the sources like images, icons for development.

Thank you !
